
5-Zone Convoluted

5-Zoned Comfort Layer

Found on our Bed 4 Life 10K3, 9500, 7500, and 5500 Airbeds, our 5-zoned Comfort Layer provides additional comfort and pressure relief for a truly unique sleep experience. Keep reading to learn more.

Our 2" 5-Zoned Comfort layer is made of a high density foam furniture foam and serves two purposes. First, it evens the sleeping surface and eliminates any seams or gaps from the air chambers below. This ensures a consistent sleep surface. Second, unlike traditional "egg-crate" foams, we have engineered the best possible configuration for each part of your body. The 5-zoned pattern on the foam layer provides additional support for your mid-section and lower back, while providing a softer feel for head and foot.

The 2" 5-Zoned Comfort Layer is combined with a 2" Memory Foam or Latex layer on the 10K3 or 9500 Airbed, and a 1" Memory Foam layer on the 7500 Airbed. In fact, our 5-Zoned Comfort Layer is so comfortable, it stands alone in the 5500, just under the pillowtop, for a quality experience at a price for any budget.
